ABSTRACT

In India, the medical industry has been developing through the services and patient treatments of doctors and nurses. The hospitals are safeguarding the people from the critical illness and varied diseases. It contains more specialized doctors, physicians, health practitioners and well trained nurses in the health centres. Many nurses offers care within the scope of general practitioner and this usual role has formed the public representation of nurses as care providers. The private hospitals have been providing crucial services to the patients and protecting their health. The nurses are an important element in hospital and giving better services. They are facing more problems and having more obstacles in their personal life. The investigator has tried to analyze their job satisfaction level of nurses in the private hospitals of Erode. They are facing more problems and having more obstacles in their personal life. So, the investigator has tried to analyze their job satisfaction level and changes of nurses in the private hospitals of Erode. The current research has adopted 100 private hospital nurses as sample respondents in the study. The study has taken empirical research design and convenience sampling adopted for the sample selection. The primary data utilized for the data collection with the help of questionnaire. The period of the crucial study has taken 1 year from September 2017 to September 2018. The percentage analysis and ANOVA test utilized for the analysis. The study has indicated that the private hospital nurses have highly satisfied in the present study.

Keywords: Private Hospitals, Nurse, Convenience Sampling, Medical Industry.

INTRODUCTION:

In India, the medical industry has been developing through the services and patient treatments of doctors and nurses. The hospitals are safeguarding the people from the critical illness and varied diseases. It contains more specialized doctors, physicians, health practitioners and well trained nurses in the health centres. The hospitals are differentiated into government and private hospitals in our country. The government hospitals include few trained nurses appointed by their work experience and eligibility. But, the private hospitals have some restrictions on appointing the nurses and utilizing some nursing students. They are playing crucial role in the hospitals and clinics. In particular, the nurses are providing services to the society and someone sacrificing their life for the profession. Nurses may be distinguishing from other special health care contributor by their caring of patient, practices and observations. Nurses work in many specialty hospitals with diverse levels of instruction authority. Many nurses offers care within the scope of general practitioner and this usual role has formed the public representation of nurses as care providers.
REVIEW OF LITERATURE:

The existing review literatures are used to undertake some methodological and for sample selection process in the study. Nelson (1949) has analyzed the leadership with employee’s behavior and satisfaction in manufacturing companies. The researcher has checked the leadership styles of 220 employees. The study found that the organization has more satisfied with interaction of the workers in organization. Ahmed (2000) has measured that the 290 samples job satisfaction and commitment of public hospitals in Riyadh city. The questionnaire has utilized for the data collection and measured the data by ANOVA, standard deviation and correlation analysis. The study has found out that the nurses satisfied in their hospitals. Bradford et al. (2009) has evaluated that the job satisfaction of 5 areas contributors and the turnover intention utilized in the study. They have utilized that 5 factors related to the satisfaction of the supervisors and co-workers in their working conditions. The study indicated that the workers have mostly satisfied in their workplace. Khan & Jan (2015) has investigated the antecedents and factor influences of job satisfaction of nurses of two Dera Ismail Khan hospitals. The study adopted 125 samples and analyzed data by correlation and regression tests for the impact of demographics and job satisfaction of employee’s. The employees are mostly satisfied with more commitment in the selected hospitals.

STATEMENT OF THE PROBLEM:

The private hospitals have been providing crucial services to the patients and protecting their health. The nurses are an important element in hospital and giving better services. They are facing more problems and having more obstacles in their personal life. So, the investigator has tried to analyze their job satisfaction level of nurses in the private hospitals of Erode.
